

Ankit Lalwani
Senior Engineer/Technology lead Developer
Contact: +1-(704) 941-1933
Website: <https://ankitlalwani.github.io/>
Email: ankitlalwani30@gmail.com

PROFESSIONAL SUMMARY:

- 🔗 **14 years** of professional I.T. Experience with a leading multi-national company.
- 🔗 Master's degree in **Computer Science** from University of Georgia.
- 🔗 **AWS Certified Solution Architect** - Associate since Jul-2022 (valid till Jun-2025).
- 🔗 13+ years of experience as a Software Engineer, with 7+ years in Charlotte, NC, US.
- 🔗 strong technical skills in **backend** and **frontend** development including web based developments.
- 🔗 Extensive experience in working on **Java** based Spring Framework such as **Spring Boot, Spring Microservices, Hibernate** etc.
- 🔗 Experienced on **MySQL, Microsoft SQL Server** and **PostgreSQL**.
- 🔗 Experience in deploying applications using **Docker** and **AWS Cloud**.
- 🔗 Worked in creating the REST based Api's and microservices in Java.
- 🔗 Good hands on with latest web development platforms such as **React JS, HTML5 and CSS3**.
- 🔗 Strong understanding of **SDLC and Agile (SCRUM)** methodologies.
- 🔗 Experience in version control using **GIT, BitBucket**
- 🔗 3+ years of experience in Mainframe development.
- 🔗 Worked as a lead developer with mentoring 13 resources through complete SLDC cycle.
- 🔗 Received MVP (Most valuable performer) award in strategic partnership for working on migration project.
- 🔗 Experienced in using Object Oriented Java script concepts for development of Rich internet desktop application.
- 🔗 Worked on developing the stored Procedures, Triggers, Functions, Views and Joins.
- 🔗 Involved in requirement gathering meeting, produced extensive analysis of the use cases and entity relationship and data flow models.

EDUCATION:

University of Georgia, Athens Masters in Computer Science	May, 2021
R.G.P.V Bhopal (MP), India Bachelor's Degree in Electronics and Communication	May, 2008

TECHNICAL SKILLS:

Programming Languages	Java, JavaScript, Python, Cobol, JCL, CICS
UI Technologies	HTML5, ReactJS
Scripting Languages	XML, JSON, JQuery, AJAX, REXX
Development Tools	Visual Studio Code, Eclipse, SQL Developer, IntelliJ-Idea

Frameworks	Spring-Boot, Spring MVC, Spring Cloud, Hibernate, Junit
Web Server	Apache Tomcat, JBOSS, Netflix Eureka
Tools	MS-Office suite (Word, Excel, MS Project and Outlook). Connexion, POSTMAN, Jenkins, Netflix Hystrix
Cloud	AWS - EC2, Kibana/Open Search, S3, CloudWatch etc
Databases	PostgreSQL, MySQL, Aurora, MongoDB
Project Execution Methodologies	Waterfall, Agile (SCRUM)

PROFESSIONAL EXPERIENCE

Client: Cognizant/Lineage Logistics, Charlotte, NC

Role: Java Developer

Mar 2021 till date

Automation API: Automating in real time application in IOT devices. This “state-of-the-art” project involve automating large capacity cold storage warehouses. The application serves as the backend for providing instructions to the conveyors/pulleys and IOT devices which provides multi-million dollar benefit to the clients in terms of productivity, improved supply chain and efficiency of the warehouse.

Responsibilities:

- ☐ Worked on converting business requirements in efficient solutions for customer using Java.
- ☐ Used Java8 features such as Lambda expressions, streaming API's for the development of services.
- ☐ Created various Rest API's in Java.
- ☐ Written various DAO classes and functionalities to interact efficiently with database using JDBC connector.
- ☐ Used PostgreSQL to write the Stored Procedures, Functions and SQL queries for interacting with Aurora database.
- ☐ Created various backend services which interacted via PulsarQ messages.
- ☐ Worked with Business stakeholders to understand the business requirements and write efficient solutions.
- ☐ Used Junit, Mockito framework for writing the effective tests.
- ☐ Participated in the multi-application/organization integration testing sessions.
- ☐ Tested various REST API's using POSTMAN, used service calls and data bindings.
- ☐ Worked on GitHub/Bitbucket for source code management/repository.
- ☐ Coordinated with QA team for the development of test scenarios. Also responsible for allocating and fixing defects.
- ☐ Represented my team at Client Location (Olathe, Kansas) in Jan-2022 for the UAT just before production live.
- ☐ Provided L2 production support for any post production issues which involves bug-fixes and RCA.

Environment: Java, AWS Cloud, PulsarQ, JavaScript, ReactJS, REST services, BitBucket, Github

University of Georgia - Academics

Jan 2020 – Mar 2021

Responsibilities:

- ❑ Involved in collecting business Requirements and discussing efficient designs with technology architects.
- ❑ Created various services on Spring Boot using Java 8 programming language.
- ❑ Worked on Spring JPA Hibernate to connect with databases such as MYSQL and POSTGRES
- ❑ Created single page application structure with multiple modules using ReactJS, JavaScript
- ❑ Created core modules and components which included Navbar, Toolbar, services and Routing
- ❑ Created various data services, error handlers which were used across application
- ❑ Created various REST API's, tested on POSTMAN, used service calls and data binding in React
- ❑ Created various data services, error handlers which were used across application.
- ❑ Implemented REST Microservices using spring boot.
- ❑ Designed a database in MySQL for course project to capture the student's extracurricular activities in a high school.
- ❑ Worked on AWS EC2 instances to deploy the application which process huge medical FMRI files.
- ❑ Worked on Google Cloud VM instances to deploy the application as a part of course project.
- ❑ Created the pipeline to process the large FMRI file in a distributed spark cluster.
- ❑ Worked on GitHub for source code management/repository.
- ❑ Created web applications using JSP, Servlets and HTML5.
- ❑ Worked on Jenkins to build pipelines for Continuous Integration/deployment.
- ❑ Coordinated with QA team for the development of test plans, test cases. Also responsible for allocating and fixing defects.

Environment: Java, Spring-Boot, Spring Microservices, JavaScript, ReactJS, HTML5, CSS3, DOM, Jenkins, REST services, AWS EC2, GCP, Spark Hadoop

Client: Wells Fargo, Charlotte, NC

Role: Java Developer

Oct 2014 – Jun 2018

Responsibilities:

- ❑ Implemented the online portal for customers using ReactJS and Spring-Boot. It provided them the functionality of accessing their daily transactions reports.
- ❑ Created various Rest API's using Spring Boot. Also used Spring JPA/Hibernate for the database connectivity with SQL Server database.
- ❑ Configured connection pools, data sources for JDBC connections on Tomcat, JBoss and Web logic servers for Oracle database
- ❑ Created various data services, error handlers which were used across application
- ❑ Created web applications using JSP, Servlets and HTML5.
- ❑ Worked with Business Analysts to understand the business model and goals.
- ❑ Worked on REST interface to create the services, tested on postman.
- ❑ Worked on Jenkins to build pipelines for Continuous Integration/deployment.

Environment: Spring-Boot, Spring Microservices, JavaScript, ReactJS, HTML5, Jenkins, Bootstrap, Agile (Scrum), REST services.

Client: Wells Fargo, Pune

Role: Java Developer.

Jun 2013-Sep 2014

Responsibilities:

- ☐ Developed user interfaces using JSP, AJAX, JSTL and JavaScript.
- ☐ Implemented Spring MVC framework for developing J2EE web based application.
- ☐ Communicated with Business Architects on a regular basis to analyse the requirements and for the preparation of detailed BRD (business Requirement document).
- ☐ Created Spring services, controllers and DAO's to achieve dependency injection.
- ☐ Integrated Spring and Hibernate ORM framework for persistence and used Hibernate DAO Support with Hibernate Template to access the data
- ☐ Worked on all aspects of web application, including testing, maintenance, debugging and deploying.
- ☐ Developed CRUD (create, read, update, delete) features of the application functionality using responsive design.
- ☐ Interacted with JavaScript controllers to write, read data from back-end servers.

Environment: HTML, CSS, Spring-MVC, Spring-Boot, JSP, Bootstrap, JSON, Eclipse, MS Office.

Client: Bank of America, Pune

Role: Java Developer

April 2012 -May 2013

Responsibilities:

- ☐ Worked on designing user screen, validations using HTML, JQuery and JSP as per the requirements.
- ☐ Worked in various phases such as Analysis, Design, Development, Review and Testing of SDLC.
- ☐ Developed user interfaces using JSP, Struts, AJAX, JSTL and JavaScript.
- ☐ Implemented Spring MVC framework for developing J2EE web based application.
- ☐ Communicated with Business Architects on a regular basis to analyse the requirements and for the preparation of detailed BRD (business Requirement document).
- ☐ Developed Message driven beans which consumed the messages from Java message queue and generated emails to be sent to the customers.
- ☐ Developed test cases and performed unit test using JUnit Framework.

Environment: JavaScript, CSS, AJAX, JSP, Servlet, JSTL, JQuery, Spring MVC, XML, Java, Eclipse, Apache Tomcat.

Client: Wachovia/Wells-Fargo, Mysore

Role: Mainframes Cobol Developer

Mar 2009- Feb 2012

Responsibilities:

- ☐ Developed complex procedures and Cobol programs to build various new functionalities in the application.
- ☐ Performed multiple batch operations every day to process customer's data.
- ☐ Extensively worked on Job control language (JCL) and procedures.
- ☐ Developed the complex sorting logics in the JCL using ICETOOL, SORT etc.
- ☐ Created huge number of setups for customers using Connexion tool.
- ☐ Involved in core banking functionality for wholesale customers, which involving processing of live customer's data.
- ☐ Extensively worked on DB2 database with modifying, altering tables. Running multiple SPUFI commands on day to day bases to modify the tables.

Environment: Mainframes, JCL, COBOL, CICS, CNX, VSAM, DB2.

Academic Project- Infosys Ltd.

Role: Intern/Trainee

Sep 2008-Mar 2009

Description: The project was to develop a Java based application for Sterling Courier service. The application should use object oriented concepts. Also it should leverage the UI with JSP's and Oracle database.

Responsibilities:

- ☐ Design the application which should support any local courier company tracking and delivering orders.
- ☐ Designed the front end application using JSP, Servlets.
- ☐ Establish connections to database using JDBC.
- ☐ Maintained the customer's data in the database and performed various SQL functions to fetch/update data.
- ☐ Used AJAX to create a more responsive UI.
- ☐ Responsible for doing the performance and user acceptance testing.
- ☐ Created Visio charts for complete workflow architecture of the application.
- ☐ User eclipse IDE and Tomcat server to develop the application.

Environment: JavaScript, CSS, AJAX, JSP, Servlet, XML, Java, Eclipse, Apache Tomcat, Struts, Java Servlets, JDBC.
